

## More flexibility in less space

**cut c** is the perfect **solution** for the **end-of-line cardboard packaging** thanks to the independent longitudinal cutting and creasing units, and the crossway unit that provide excellent **flexibility for box formats** while keeping **high productivity** levels and **minimizing the space** that is normally necessary to store the different types of boxes. The machine can be equipped with a rear multiple **cardboard box feeder (various widths)** in order to **minimize waste**.

SPACE  
OPTIMIZATION

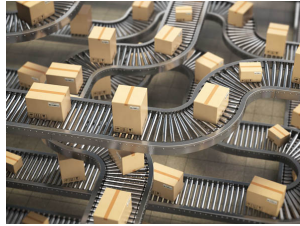

This solution **avoids** the **storage** and **handling** of dozens of different box formats, resulting in less labor.

PRODUCTIVE  
FLEXIBILITY

It is possible to create **customized cardboard box**, which differ one from the other in format and size according to just in time principles.

HIGH  
PRODUCTIVITY

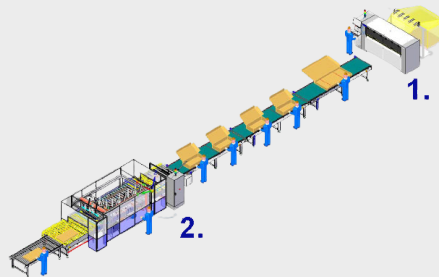

Up to **4 boxes per minute** (**different from each other**) thanks to the brushless motors on each group for the shortest possible setup time.

Did you know that we have the right solution even for **high volume kit furniture manufacturers** that allows you to get **over 1500 packages per shift**?
